

CRONOSDOG \$BARK

Community. Creativity. Collaboration.

A meme token within the Cronos ecosystem.

WHITEPAPER | VERSION 1.0 | 8 OCTOBER 2026

This whitepaper provides an overview of the CronosDog project, its token, community activities and potential areas of development. It is an informational description of the project, not a commitment to future deliverables or financial outcomes.

1. Project overview

CronosDog (\$BARK) is a community-oriented meme token on the Cronos blockchain. Its identity - the guard dog of Cronos - represents loyalty, creativity, resilience and shared participation. \$BARK focuses on community and culture; it does not claim to provide blockchain infrastructure, cybersecurity services or guaranteed financial utility.

2. Vision and approach

CronosDog aims to support an engaged community through original content, social interaction, grassroots initiatives and cooperation within the wider Cronos ecosystem. The project may explore connections between online communities, independent creators and real-world activities. Its priorities can evolve based on community interest, available resources, technical feasibility and market conditions.

3. Token information

Name	CronosDog
Ticker	\$BARK
Blockchain	Cronos (EVM)
Token contract	0x8dd02ff5ba108dfe0dd250335d0c3110373ab9c2
Reported token supply	1,000,000,000 BARK

Token balances, circulating supply, liquidity and any completed burns should be checked against current on-chain and market data. Contract functionality, permissions and transaction costs are determined by the deployed token contract and the platforms used.

4. Tokenomics and distribution

\$BARK entered circulation through its launch process. The distribution of tokens can change through holder transactions, liquidity operations, project-related transfers and any verified burns. This document does not establish or guarantee a fixed allocation to the team, treasury, liquidity, marketing or other participants. Current token holdings and circulation should be assessed from publicly available blockchain records rather than assumed from estimates.

5. Community and ecosystem initiatives

Community activity may include memes, creative campaigns, community discussions, education, holder recognition and voluntary participation. CronosDog may also explore activities with independent ecosystem projects or communities. The nature and duration of each initiative are decided separately and may be adjusted or discontinued.

6. Real-world participation

CronosDog may explore voluntary involvement by individuals and independent businesses that wish to contribute to awareness or community development. Possible arrangements include promotional activities, token acquisitions, contributions to project resources or voluntary token burns. These are examples of potential initiatives, not automatic token functions or binding commitments by the project or third parties.

No external supporter is required by this whitepaper to provide funding, purchases, services or ongoing participation.

7. Treasury, token purchases and burns

Project-managed resources, when available, may be used for community initiatives, ecosystem activities or operational needs. Any token acquisition or burn depends on separate decisions and the resources available at that time. Tokens held in a treasury are not the same as permanently burned tokens. Completed transactions may be shared through official communications and verified on-chain.

This whitepaper sets no minimum contribution, fixed buying schedule, guaranteed burn rate or required treasury allocation.

8. Areas of potential development

Potential areas of exploration include community-led campaigns, creative content, ecosystem collaborations, optional third-party integrations, real-world awareness and transparency initiatives. These areas are illustrative; they do not constitute a fixed roadmap, delivery timeline or commitment to launch any particular feature.

9. Independent participants and partners

Businesses, platforms, creators and other parties that may participate in activities involving CronosDog remain independent. Nothing in this document implies a permanent partnership, third-party endorsement, agency arrangement or revenue-sharing entitlement. Holding \$BARK does not grant ownership of an external business or rights to its revenues.

10. Risks and notices

\$BARK is a speculative digital asset and may be subject to significant volatility or total loss of value. Risks include liquidity constraints, price slippage, smart-contract vulnerabilities, market conditions, service disruptions, wallet security and changes to applicable laws or regulation. Ownership of \$BARK does not give holders guaranteed profits, dividends, yield, redemption rights or claims against independent businesses.

This document is not financial or investment advice and does not create guaranteed economic rights. Statements of current intention may change. Nothing in this document overrides applicable law or obligations established by the actual facts.

11. Official information

For current project announcements, community channels and token information, use the official project website and links published through its verified channels.

12. Document updates

This whitepaper describes the current vision and direction of the CronosDog project. The project may evolve over time, and this document may be updated to reflect new developments, changes in strategy, or additional information. No specific future activities, partnerships, or outcomes are guaranteed.
